1. Создаем схему

2. Пишем код http

```
<!DOCTYPE html>
<html lang="ru">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Beном</title>
  <style>
    body {
       font-family: Arial, sans-serif;
       display: flex;
       flex-direction: column;
       align-items: center;
       justify-content: center;
       height: 100vh;
       background-color: #1a1a1a;
       color: white;
       text-align: center;
    }
    .venom {
       font-size: 24px;
       margin: 5px;
  </style>
</head>
<body>
  <h1>Слово "Веном"</h1>
  <div id="venom-container"></div>
  <script>
    const container = document.getElementByld('venom-container');
    const count = 100; // Количество слов "Веном"
    for (let i = 0; i < count; i++) {
       const venomWord = document.createElement('div');
       venomWord.className = 'venom';
       venomWord.textContent = 'Веном';
```

3. Выводим результат через любую машину
